## 02 Statistical Appendix

# Introduction

This Report presents the 2024 statistical data on intercountry adoptions in our Country. Prepared with a new graphic layout aimed at providing easier reading of data and information of interest - also through the use of infographics - it is a useful tool for anyone wishing to gain deeper insight into the legal framework of intercountry adoptions, governed by Law no. 184 of 4 May 1983.

The Report is divided into three parts: the first introduces the reader to the organisation and functioning of the Commission for Intercountry Adoptions; the second part examines the phenomenon in greater depth, with particular attention to the characteristics of adoptive families and children adopted, the main countries of origin, and the duration of the adoption process; the third and final part contains an appendix on international relations and statistical tables.

While referring readers to the Report for further details, some general considerations are outlined below. The analysis of intercountry adoption flows in the period under review highlights an increase in the number of adoptions carried out compared with 2023. In 2024, in fact, there were 691 foreign minors for whom authorisation to enter and reside in Italy was granted, an 18% increase compared to the previous year.

Similarly, there was an increase of about 12% in adoption procedures.

## Some specific areas remain constant.

As in the previous year, the countries of origin accounting for the highest number of adoptions in 2024 are Hungary, with 149 adopted children, followed by Colombia (110) and India (104).

The age of minors at the time of entry continues to show a slow but steady increase over the years: in 2024, the average age of adopted children was 7 years, compared with 6 years and 8 months in 2023. The presence of very young children (aged 0–1) remains marginal.

For the year under review in this Report, the significance of the number of adoptions of minors with special needs remains unchanged: 67% of the total number of adopted children, or about 465 minors, have at least one special condition. The largest category remains that of children over 7 years of age, but the weight of complex situations including the presence of siblings and physical and/or mental disabilities is also significant.

With regard to the timing of the adoption process, the phase between assignment to the Authorised Agency and matching with a child shows the greatest variation, depending on the country chosen by the prospective adoptive parents. This phase is determined by the central authority of the country of origin and is therefore influenced by the geopolitical context in which that country operates. This document seeks to promote up-to-date knowledge of the phenomenon and to contribute to the development of effective, transparent, and child-centred adoption governance. It is intended to serve as a reference for practitioners, policymakers, and adoptive families.

I would like to express my heartfelt gratitude to all those - families, Commission members, stakeholders, Authorised Agencies, and collaborators - who, through their dedication and professionalism, made it possible for 691 children to come to Italy, offering them a warm welcome, support, and the opportunity for a new beginning. Further details can be found in the following pages.

*Vincenzo Starita*

## Statistics on Intercountry Adoption in Italy

# 1.1

## Families who applied for authorisation to bring foreign children into Italy

In 2024, 536 families applied for authorisation for foreign children to enter and reside in Italy, marking a 12% increase compared to the previous year, when there were 478 applications. Over the five-year period 2020–2024, the number of adoptive families remained stable, except for a decline recorded in 2023, with the total staying below 600 each year (Fig. 1).

At the local level, the regions with the highest absolute number of adoptive families were Lombardia and Campania (77 couples each), followed by Puglia (50), Veneto (48), and Lazio (45). However, the relative analysis—which relates the number of adoptive families to the number of resident families—paints a different picture: Basilicata shows the highest incidence (6 adoptive couples per 10,000 resident couples), followed by Calabria (5), and Friuli-Venezia Giulia and Campania (4 each) (Fig. 2).

### 1.1.1

## Profile of families who applied for authorisation to bring foreign children into Italy – Age and educational qualifications

Regarding the age of prospective adoptive parents at the time of the decree of suitability to adopt, the most represented age group, for both husbands and wives, is between 40 and 44 years. The average age is 45 years for husbands and 43 years for wives (Fig. 3). Given the length of the adoption process, by its conclusion the average age rises to 48 for husbands and 46 for wives (Fig. 4). The profile of adopting couples is characterised by a generally high level of education: over 90% of spouses have at least a secondary school diploma. In particular, 70% of wives and 55% of husbands hold a university degree (Fig. 5).

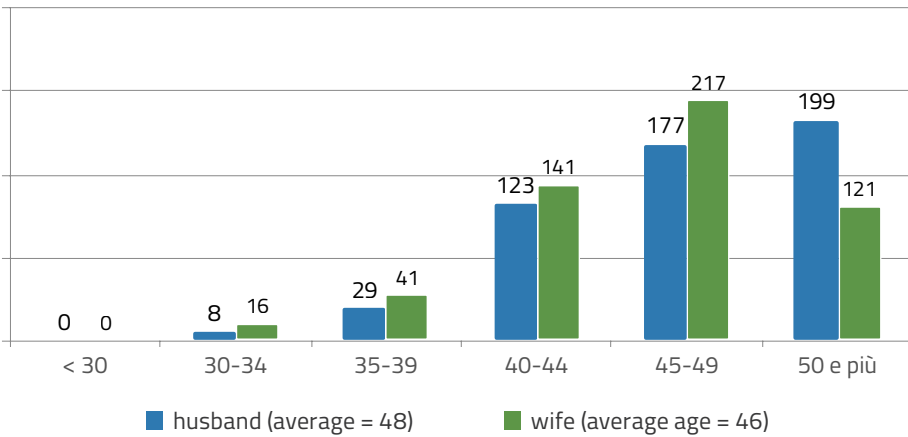

Fig. 4  
Age of spouses at the date of authorisation to enter, 2024

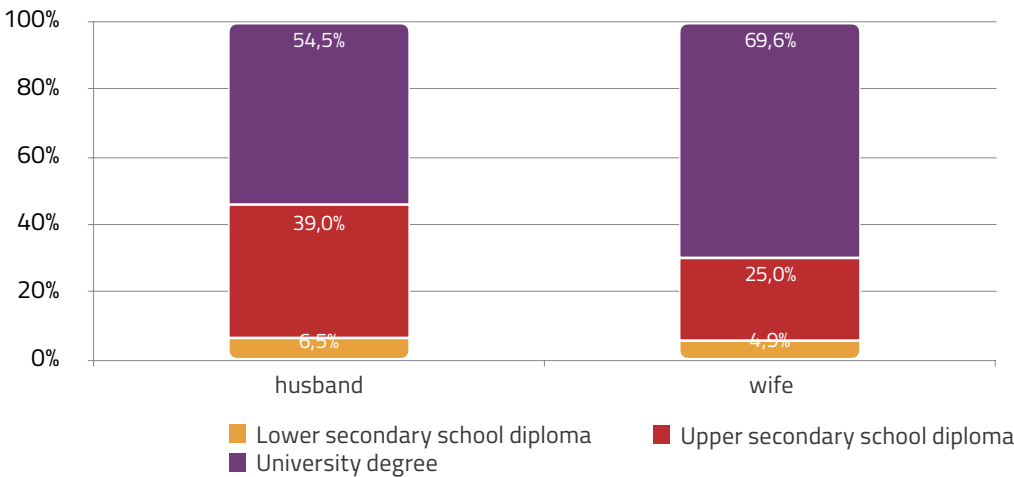

Fig. 5  
Spouses' educational qualifications, 2024

### 1.1.2

## Profile of families requesting authorisation for the entry of foreign children into Italy – Motivations

Families clearly stated that their reasons for adopting were related to the impossibility of procreation, which was the most frequent reason (78%), followed by an unspecified reason (12%). Only a small residual percentage of families (6%) reported having pursued adoption out of a genuine desire to adopt (Fig. 6). Among those who reported being unable to have children, about 10% already had at least one child in the family (either adopted or born before the onset of infertility).

The percentage of families with no children is 85%, while 13% of adoptive families in 2024 already had a child—consistent with figures recorded in previous years (Fig. 7).

Approximately 3 out of 4 adoptive families, or 76%, adopted only one child; about 19% adopted two, and a not insignificant 5% adopted three or more (Fig. 8). This is also in line with findings from previous years.

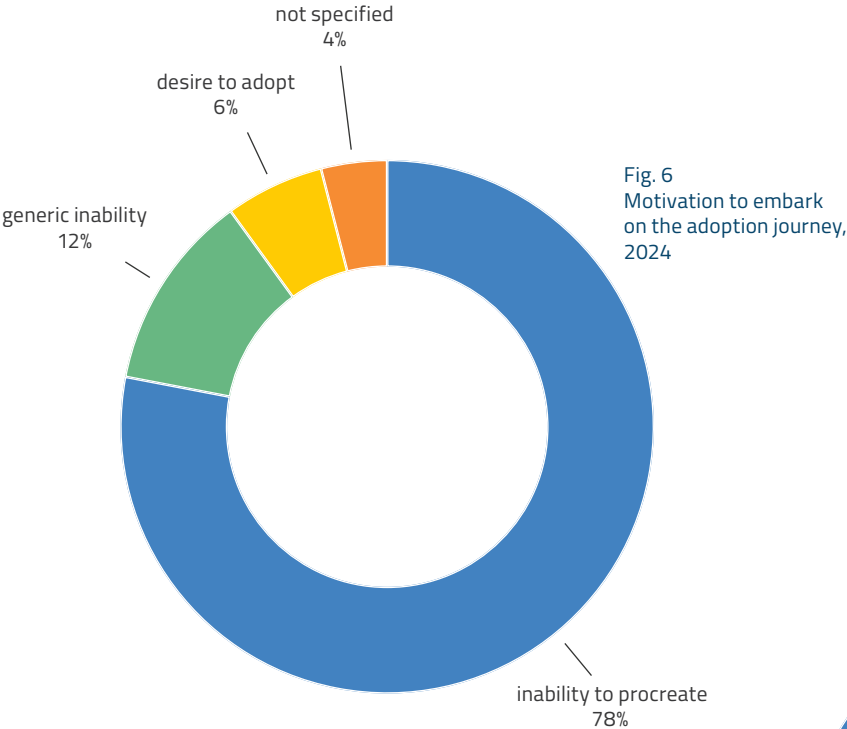

Fig. 6  
Motivation to embark on the adoption journey, 2024

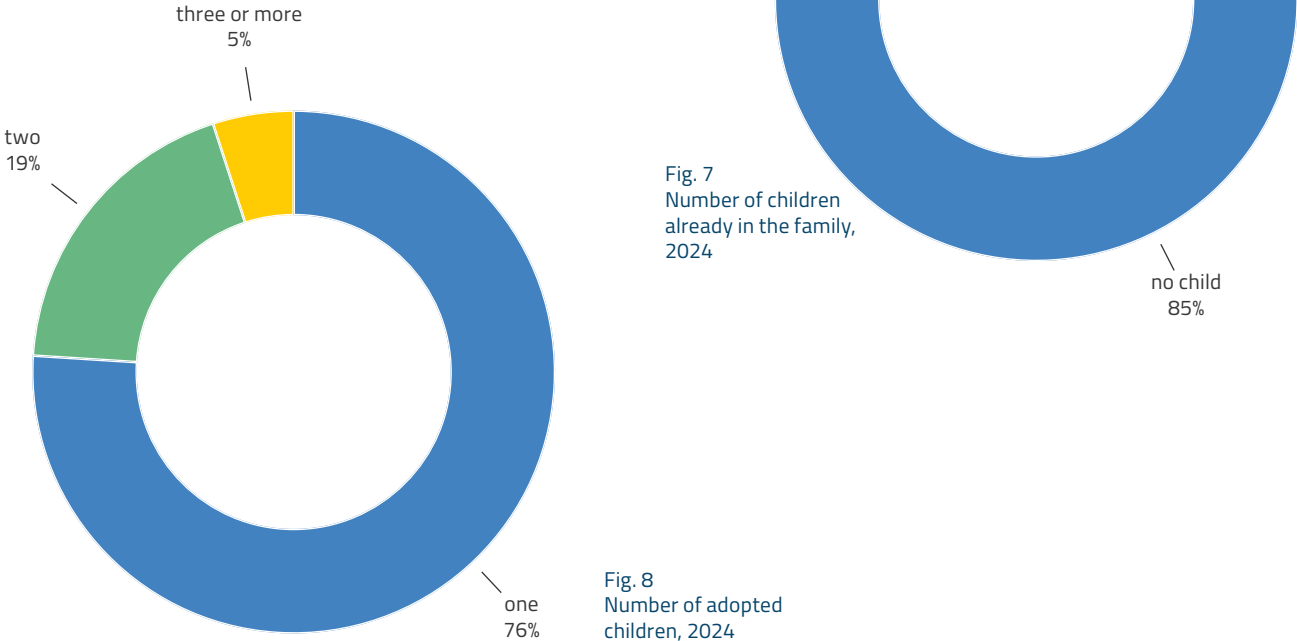

Fig. 7  
Number of children already in the family, 2024

Fig. 8  
Number of adopted children, 2024

### 1.1.3 Timing of the adoption process

The process followed by couples who completed an adoption in 2024—from the submission of the application for adoption suitability to the competent Juvenile Court, up to the authorisation for the child’s entry and residence in Italy—had an average duration of 53 months, equivalent to almost four and a half years. This figure is broadly in line with what was recorded in 2023, when the average duration was 52 months.

Among the various stages that mark the adoption process, the one that most affects the overall duration is the period between the assignment of the case to an Authorised Agency and the authorisation for the child’s entry and residence in Italy (highlighted in the box), which lasts an average of 31 months (Fig. 9). In the previous year (2023), the average time for this phase had been slightly longer, at 33 months.

The phases preceding the assignment—namely, from the submission of the declaration of availability to adopt until the decree of suitability to adopt—last on average about one year, while the period from the decree to the assignment to an Authorised Agency is slightly shorter, at 10 months. In the previous year, the durations between these stages were both slightly shorter: 11.2 and 8.2 months, respectively.

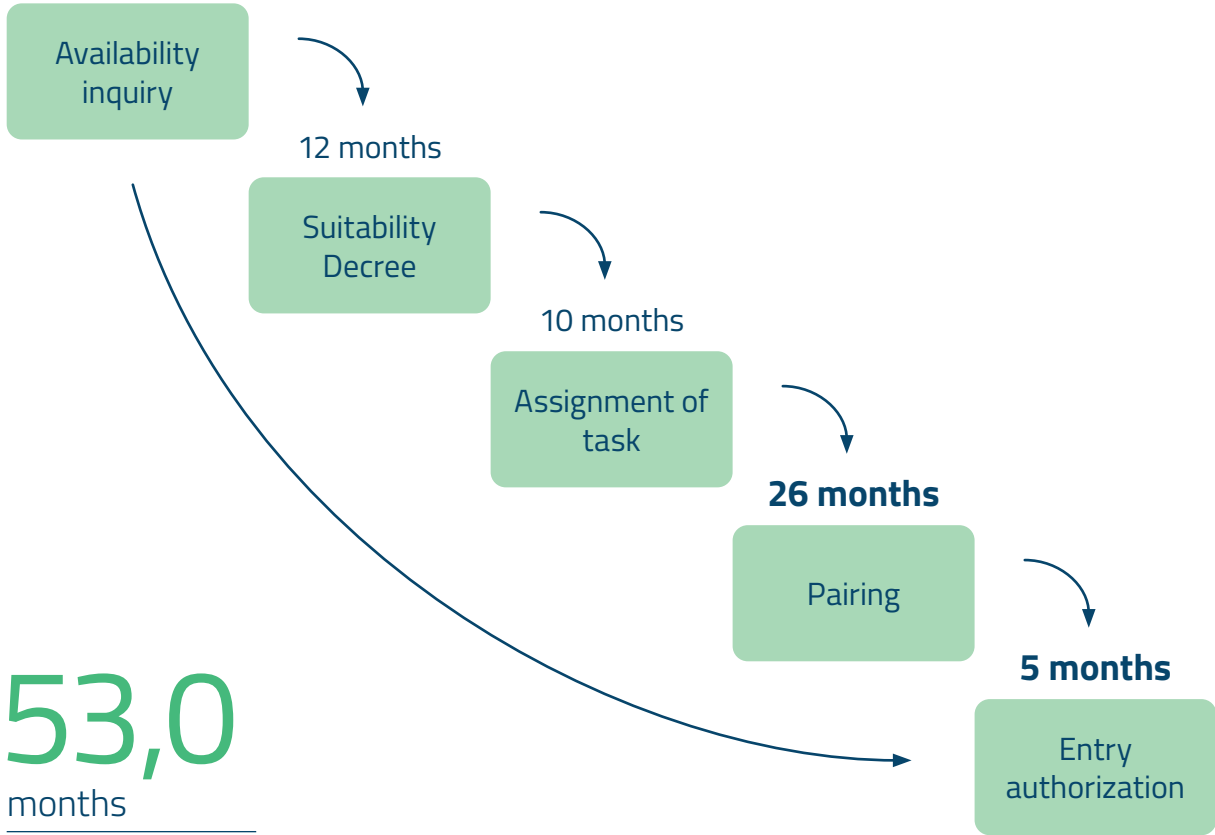

Fig. 9  
Average duration (in months) of the adoption process, 2024

The time interval between case assignment to an Authorised Agency and matching with a child shows significant variability, ranging from a minimum of 14.4 months for Hungary to a maximum of 45.8 months for Bulgaria. It is precisely the duration of this stage that has the greatest impact on the overall length of the adoption process, since the time intervals relating to the other stages are, by contrast, considerably more uniform.

With 77.8 months, Haiti is the country with the longest adoption time, followed by the Philippines (70.8) and Bulgaria (66.3). The process is roughly half as long for Brazil (36.8) and Congo (39.4). The time lapse between the declaration of availability to adopt and the decree of suitability to adopt shows relatively limited variability between countries, with the longest durations recorded for the Philippines (15.4 months), Hungary (13.7), and Sierra Leone (13.6). The time between the decree of suitability to adopt and the assignment of the case to an Authorised Agency—an average of 10 months—is particularly long for Haiti (17.2) and India (13.8), while for the rest of the countries the interval is close to the average value.

There is considerable variation in the time between case assignment to the Authorised Agency and matching with a child, ranging from 14.7 months in Hungary to 45.8 months in Bulgaria.

Average duration (in months) of the entire adoption process according to the timing of intermediate stages, by country of origin, 2024

# 1.2

## Children who were granted authorisation to enter and reside in Italy

In 2024, 691 foreign children were granted authorisation to enter and reside in Italy, up from 585 in the previous year, a positive change of +18%. This indicates a modest recovery, consistent with the positive post-pandemic trend and in contrast to the unexpected decline observed in 2023 (Fig. 11).

Over the five-year period 2020–2024, the total number of children adopted showed a slight increase (+3%), remaining below 700 per year and following a relatively stable trend, except for the decline observed in 2023.

2023

Fig. 11  
Children who were  
granted authorisation to  
enter and reside in Italy,  
2020–2024

Analysing the geographical origin of children for whom authorisation to enter and reside in Italy was granted during the period 2020–2024, it emerges that the largest share comes from Europe (34%, or 1,131 children), followed by the Americas (32%, or 1,056 children) and Asia (25%, or 842 children). Africa accounts for the smallest share (9%, or 294 children), but it is also the region that recorded the most significant increase during the period, with a +71% change. Substantial growth is also observed for children from Asia (+59%), while adoptions of children from the Americas (-14%) and Europe (-20%) declined.

### 1.2.1

## Profile of children who were granted authorisation to enter and reside in Italy in 2024

Among the children granted authorisation to enter and reside in Italy in 2024, there is a slight predominance of males, accounting for 51% (Fig. 13). This trend is confirmed across all continents of origin, with the exception of Asia, where there is a female majority, representing 55% of adopted children (Fig. 14).

In terms of countries of origin, Hungary ranks first with 149 children, followed by Colombia (110) and India (104). These three countries alone account for more than half (52%) of the total number of children adopted in Italy during 2024.

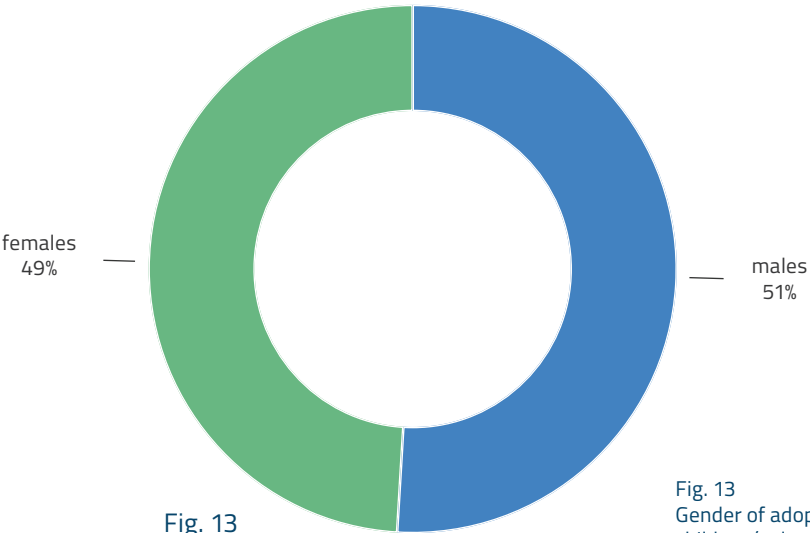

Table 2  
Continent, gender, and country of origin (absolute values)

With regard to the age of adopted children, the average recorded in 2024 is 7 years. This average, slightly higher than in 2023 (6.6 years), nevertheless reflects very heterogeneous situations depending on the country of origin. Limiting the analysis to countries from which at least five children were adopted, the average age varies widely: from a minimum of 3 years for children from Pakistan to a maximum of 10.3 years for those from Moldova. In between, among the countries with the highest number of adoptions, are India with 5.7 years, Hungary with 7.2 years, and Colombia with 8.1 years. Overall, the percentage of children authorised to enter who are over 7 years of age is 47.2% of the total (Fig. 15).

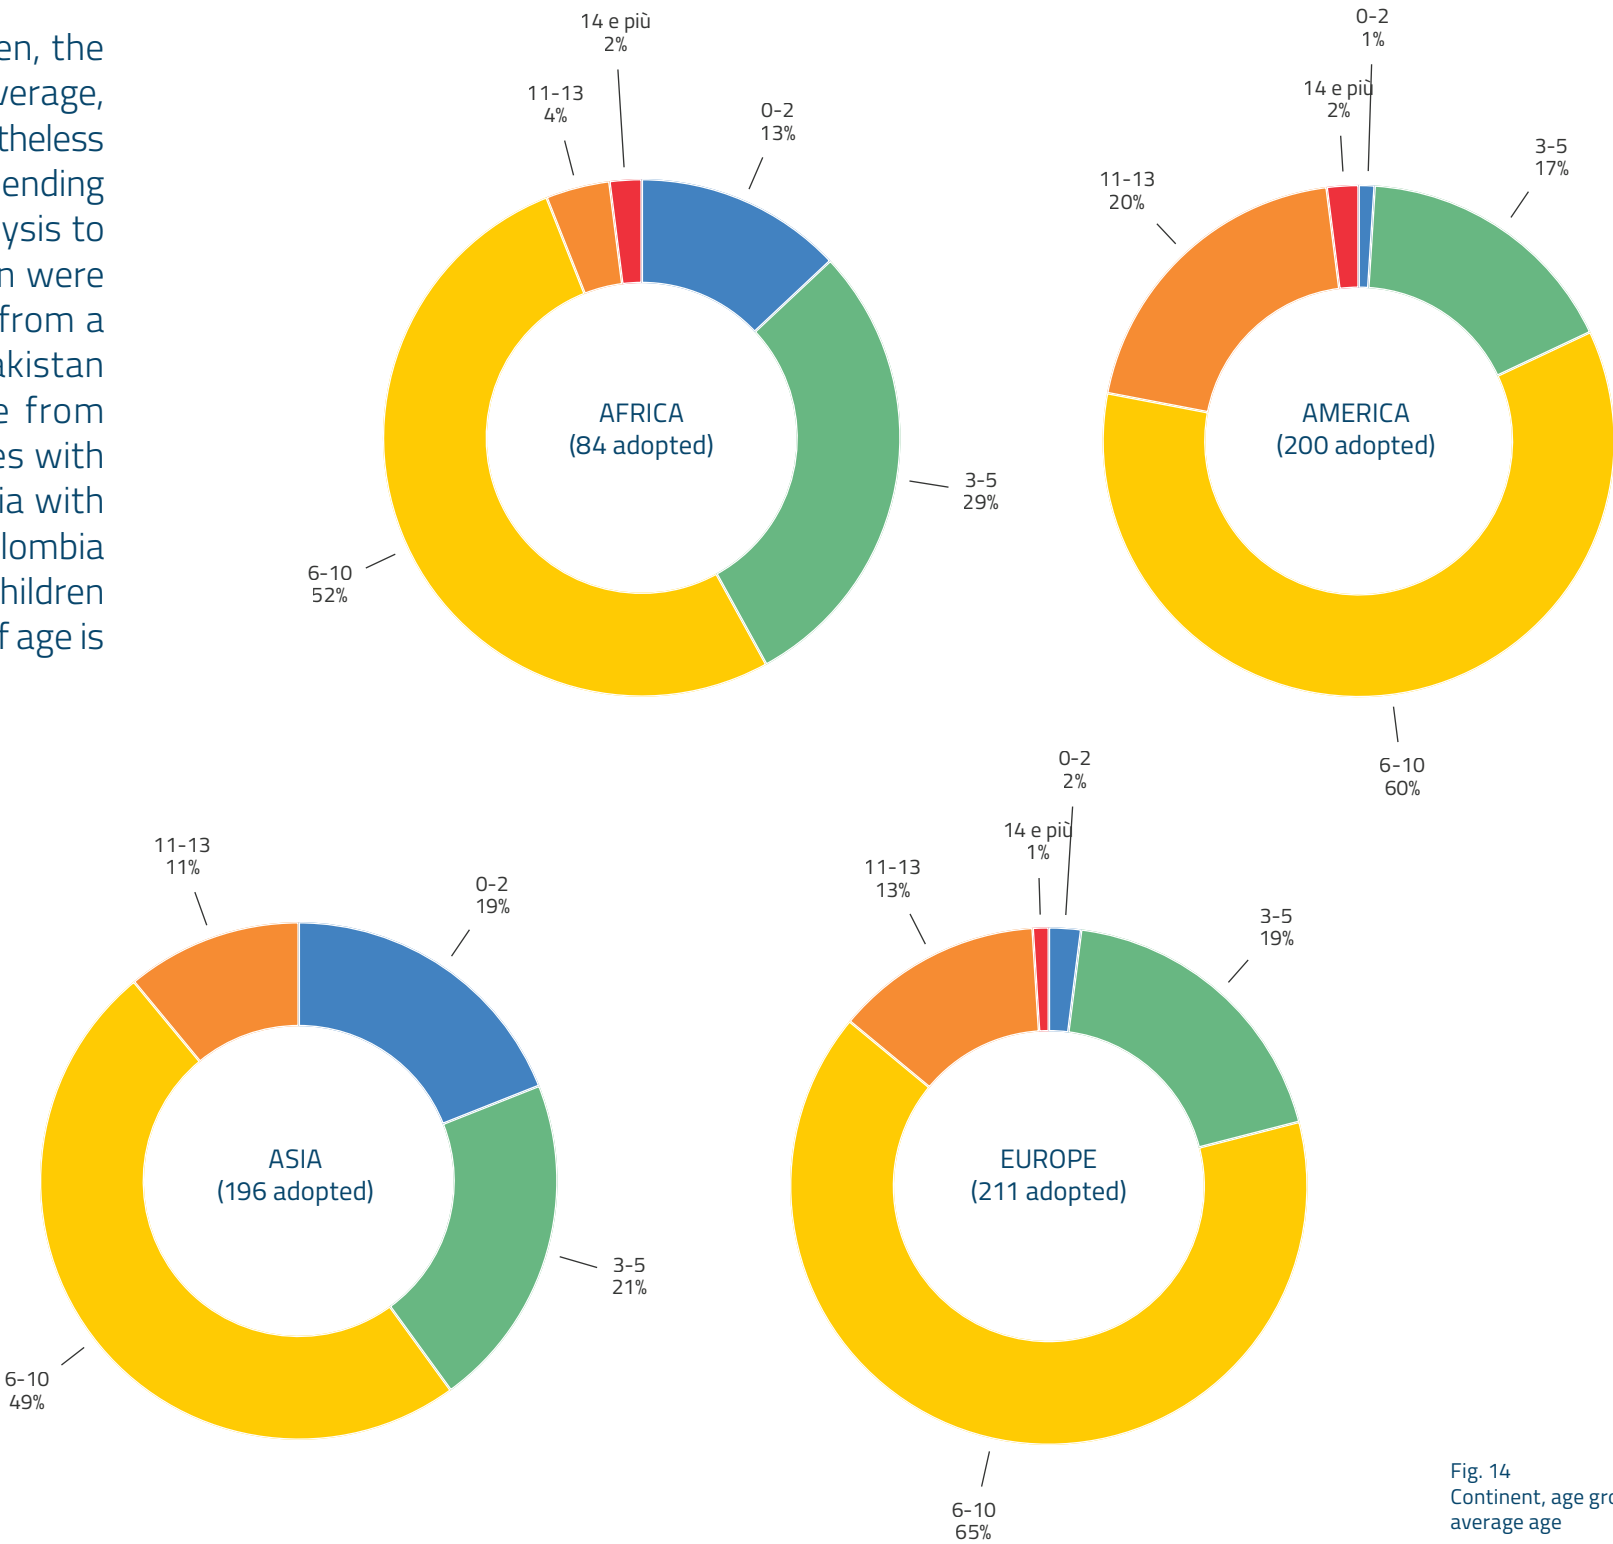

Fig. 14  
Continent, age group, and  
average age

### 1.2.2

## Children with special needs who were granted authorisation to enter and reside in Italy in 2024 – A focus

Over the years, the issue of international adoptions of children with special needs—who present characteristics that make the adoption process more complex or require particular attention and support—has gained increasing importance, especially in light of the rise in authorisations for entry recorded in 2024.

Special needs are classified into four broad categories, which can, in varying combinations, coexist in the same child. Health-related information contained in the documentation for the adopted child is provided by the country of origin. This documentation, in some cases, is affected by partial information and may include:

- Children older than seven years (from 7 years and one day)
- Various physical and mental disabilities
- Children who have experienced severe traumas or present behavioural problems
- Sibling groups (brothers and/or sisters) consisting of three or more children

In 2024, of the 691 children granted authorisation to enter Italy, 465 had at least one of the aforementioned conditions, accounting for 67% of all adoptees. Among these, 45% had special needs solely related to age, while 55% of the children presented diverse situations that included other issues. Children with special needs due to health-related causes made up 26% of the total. In about 1 in 10 cases (9%), the special need was attributable to category 4 (sibling groups of three or more children). According to the Permanent Bureau – Hague Conference on Private International Law (HCCH).

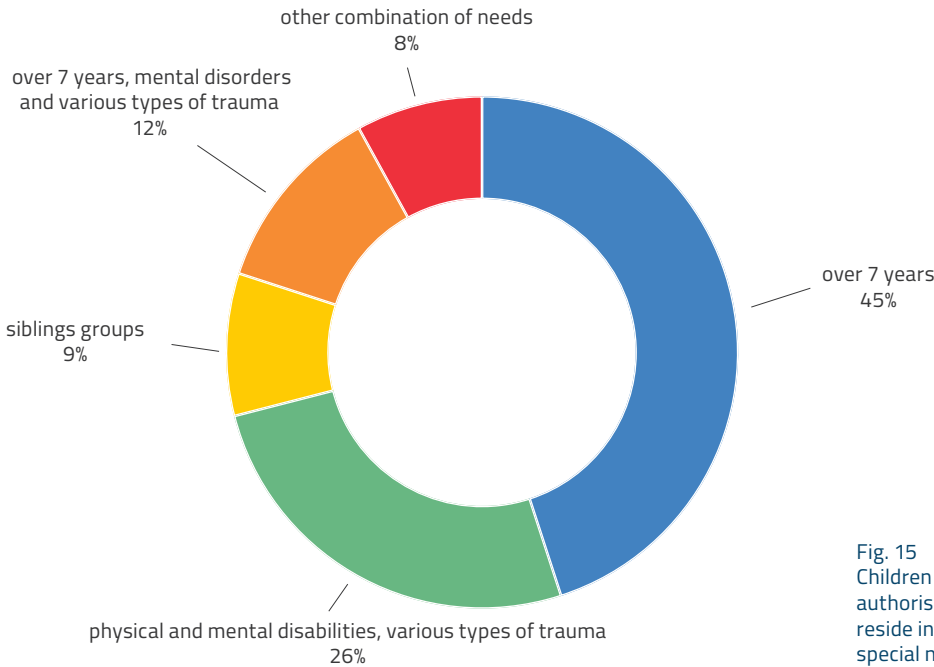

Fig. 15  
Children granted  
authorisation to enter and  
reside in Italy, by type of  
special need, 2024

As for the continent of origin of children with special needs, Africa is the only case where the share of children with special needs is a minority, standing at 33% of the total number of children with special needs. For children from the Americas, three out of four (75%) were found to have at least one special need, while for Europe and Asia the percentage was 65%.

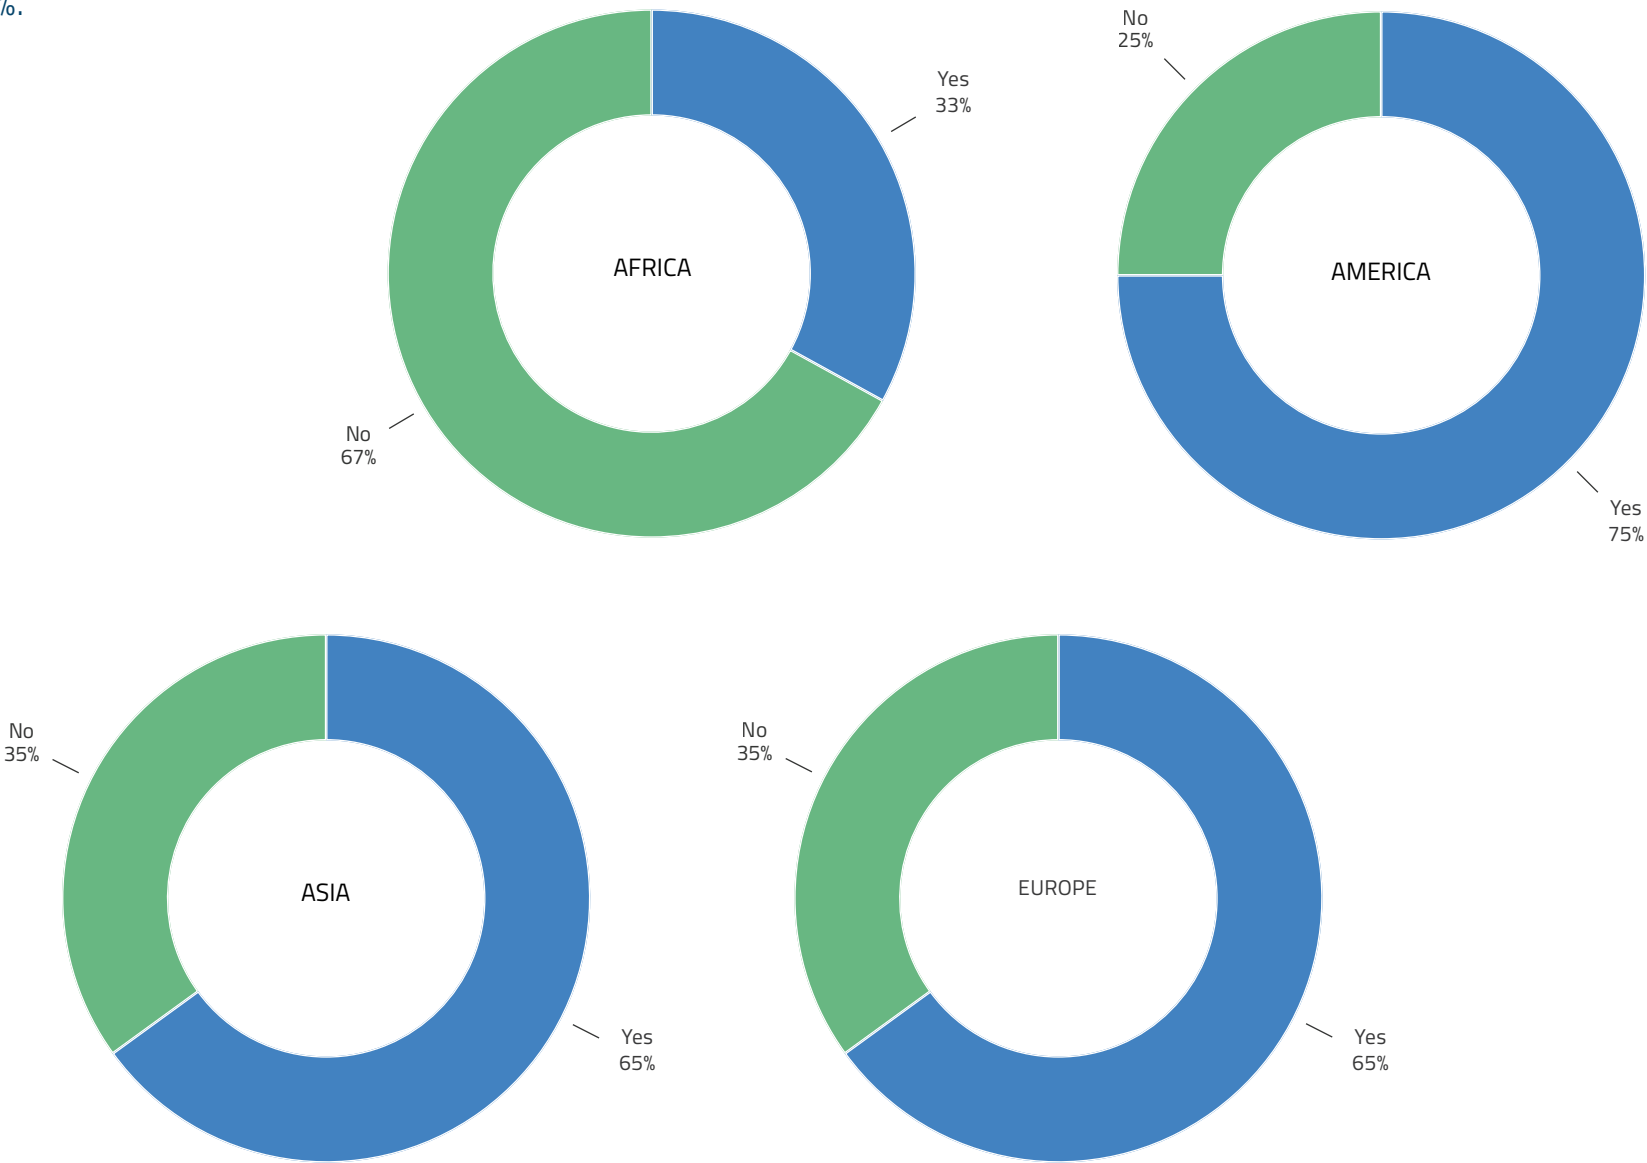

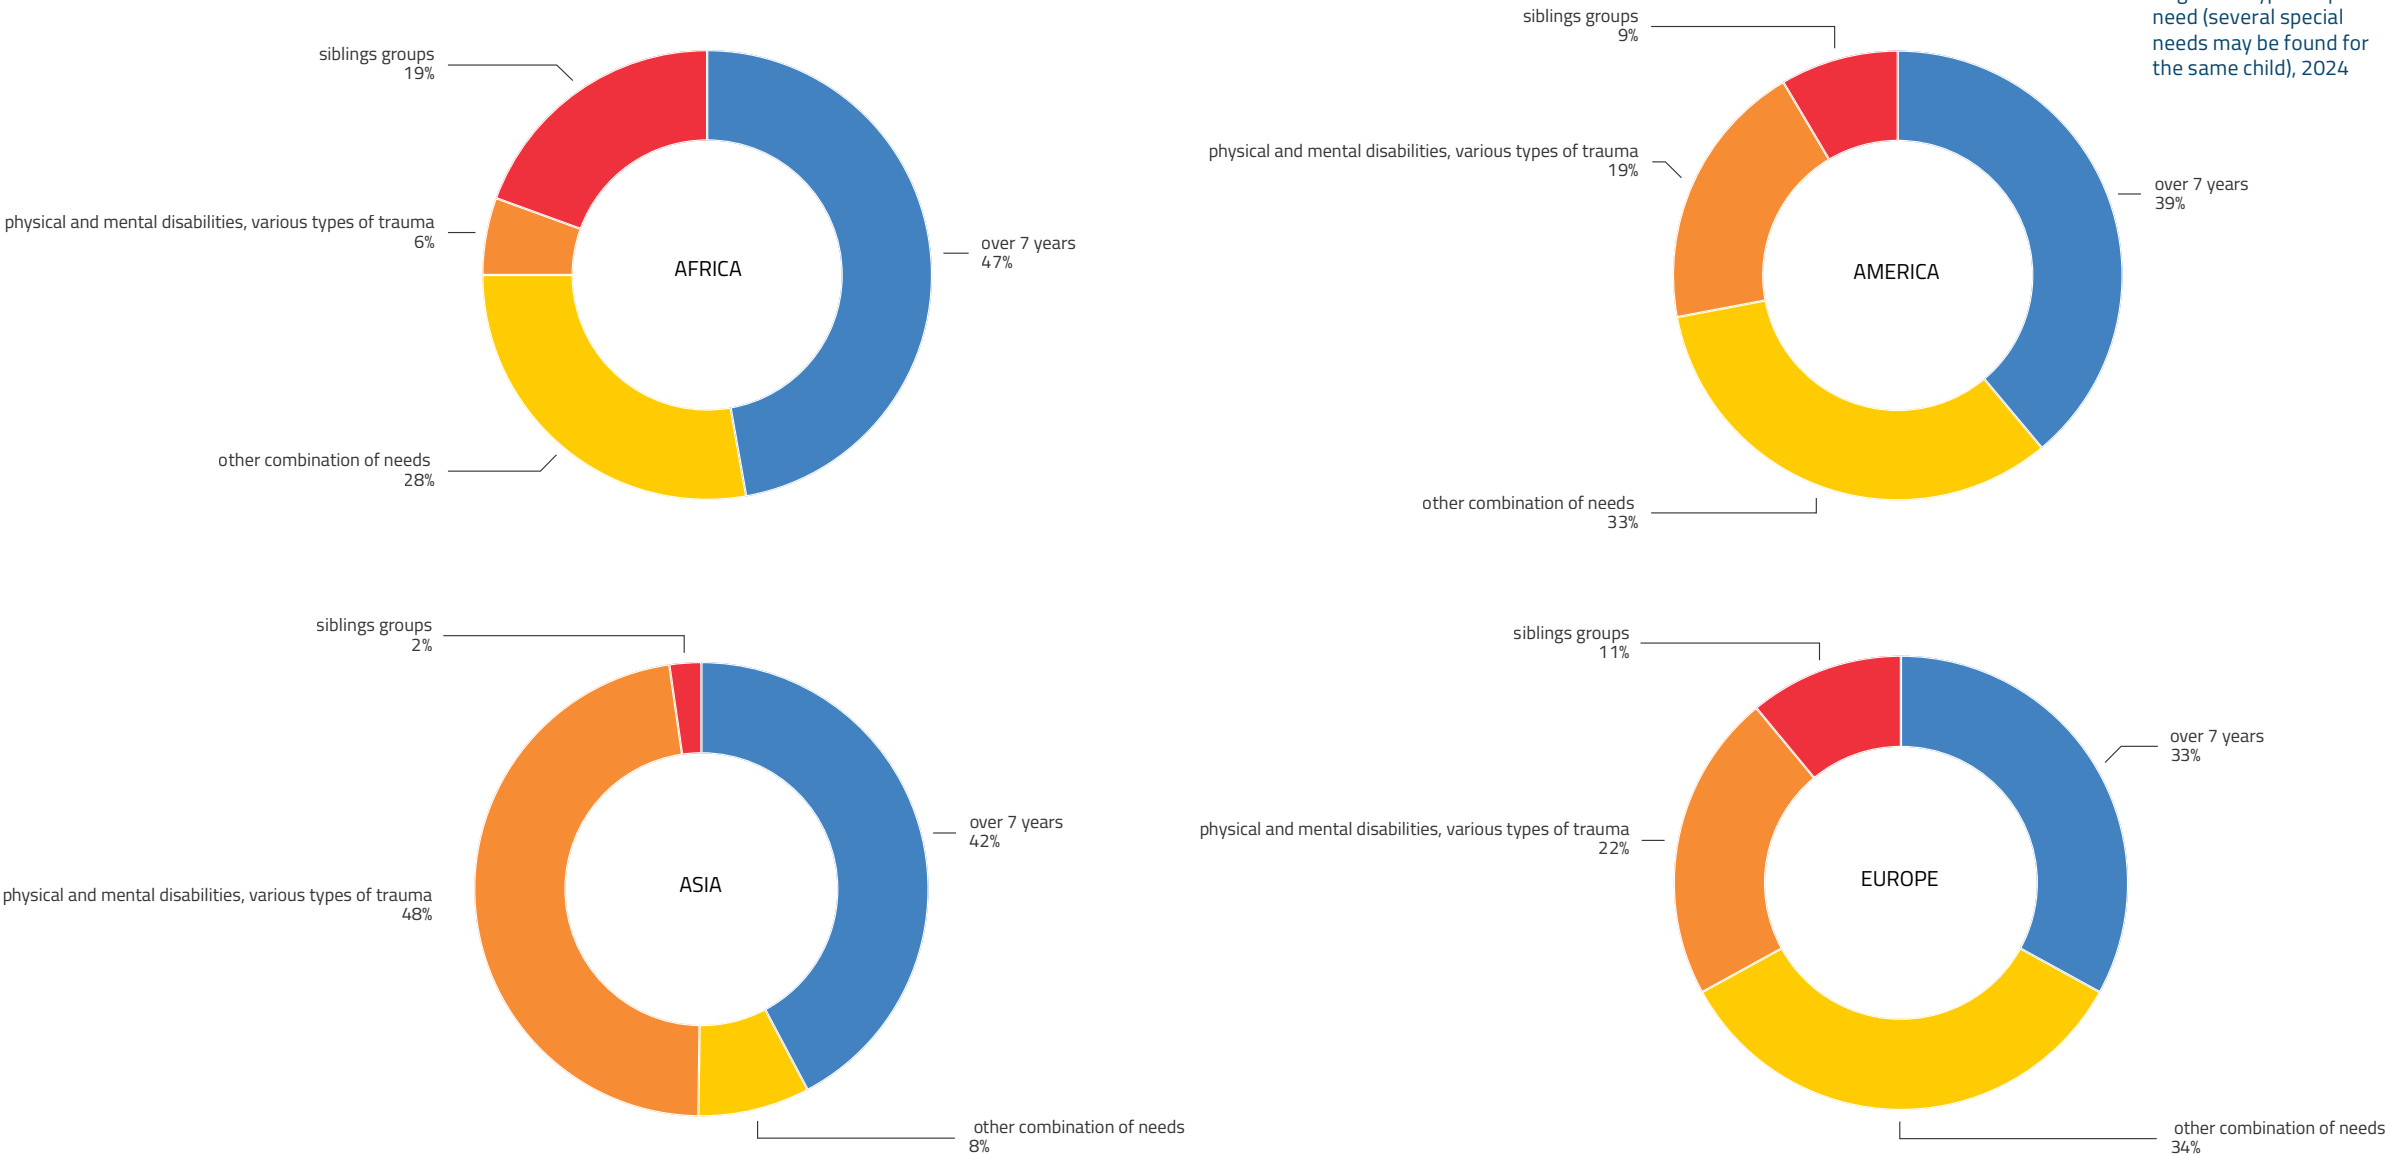

Fig. 16  
Percentage of children  
with special needs by  
continent of origin, 2024

Regarding the type of special need identified, it emerges that among children, the number of cases where the special need is related to being over 7 years old (including in combination with other needs) is 67% for Europe, 75% for the Americas, and 72% for Africa, while for children from Asia this figure drops to 50%. Among the latter, however, the share of those with physical/mental disabilities or traumas of various kinds stands out (about 1 in 2 children, or 48%).

Fig. 17  
Children with special  
needs by continent of  
origin and type of special  
need (several special  
needs may be found for  
the same child), 2024

Finally, a breakdown of the average duration of the adoption process distinguishes between adoptions of children with special needs and those without. The adoption process was completed on average in 52.6 months for the first group and 56.3 months for the second. The difference is mainly concentrated in the phase between the assignment of the case to the Authorised Agency and the authorisation for the child’s entry and residence in Italy. In this phase, 31.4 months elapsed on average for children with special needs, while the interval rose to 36.5 months for those without.
